DETAILED ACTION

Allowable Subject Matter

1. Claims 1-6 are allowed.

With regards to claim 1:

- The allowable subject matter is the combination of three plates interconnected to one another via an intermediary plate, which is one of the said three, such that they can move relative to one another and the first and second connection members, which connect the intermediary plate with the other two plates, must be orthogonal to one another. This has not been found to have been taught or disclosed in the prior art found at this time. The best references found: Kan et al. (US 5,927,414), Simon et al. (US 5,468,055), Parison et al. (US 6,364,078), and Mizutani et al. (PG Pub. 2006/0144626) disclose a teach the dampening of vibrations within the wheel and with respect to the motor mounted in the wheel, however, the above mentioned combination cannot be reasonably taught by combing the above pieces of art.
 - Also, the pieces of art submitted by applicant cannot overcome applicant's claim because WO 2002/083446 does not disclose the combination of three plates interconnected to one another via an intermediary plate, which is one of the said three, such that they can move relative to one another and the first and second connection members, which connect the intermediary plate with the other two plates, must be orthogonal to one another. This reference alone is not sufficient to reject claim 1. While

many of the additional references disclose this orientation, none disclose this within a wheel nor would it be obvious to incorporate this idea into a wheel with built in motor, since there is no clear teaching of a plate being attached to the wheel, with which the two others would interact with out significant alteration which would come as a result of hindsight reconstruction. Therefore claim 1 and those that depend there from are found to be allowable.
